

Protect your equipment
and the safety of your loved ones!

LE2000™

Protect Your Seasonal Equipment

LE2000™ is the first self-powered miniaturized asset tracking and remote control device so unique it has received five US patents including **US 6297768**. It uses the US Military's Global Positioning Satellite System to locate an asset then it communicates back using proprietary worldwide cellular phone communications networks to report location, sensor status and other data.

LUNAREYE system users can receive the reports and control their assets via the Internet, two-way pager, or by phone. The **LE2000™** is a completely covert (hidden) device, installed out of sight. **LE2000™** operates on its own battery for extended periods depending on frequency of use. When installed on a vehicle or other powered asset, it works on the vehicle's battery or asset power and switches to its own battery if the external power source fails or is disconnected

FEATURES

- Reports asset location, speed and direction via the Internet or telephone on-demand.
- Geo-fencing provides an invisible fence around the asset each time it is parked and reports any violation to the asset owner. Owner selectable perimeters include: 1500ft., and 1, 5, 10, 15, 30, 50, 75 or 100 miles.
- Seasonal use programs allow you to turn on and turn off monitoring services saving you money!
- TiltTrack™ provides immediate notification if your motorcycle is raised from its kickstand without your key in the ignition.

- Locate family members quickly and easily when they don't return as planned
- User configurable to Auto-Report location every five minutes, scalable to once each day or when a state line is crossed.
- Automatic low battery alerts for the LE2000 battery or for an external vehicle battery or asset power source.
- All information is displayed on our secure Internet Portal www.portaleye.com from anywhere in the world.
